

CHERRIES

Dry extract of cherry peduncles (*Prunus cerasus* L.)

The Product characteristics:

- Our dry extract is obtained through aqueous extraction with a 1:4 drug/extract ratio.
- The processing of the peduncles allows to maintain the integrity of the phytocomplex and all the beneficial properties of the cherry.
- The raw material is of European origin and the traceability of all stages of the production process is guaranteed, from the raw material cultivation to the product final processing.

The peduncles:

Cherries contain a significant proportion of anthocyanins that have proved to have a high antioxidant action. Mucilage, tannins and phenols, together with anthocyanins, provide useful anti-inflammatory properties in the treatment of cystitis. In addition, the presence of phytocomplexes have draining properties for which the extract is used to reduce water retention, as an adjuvant in the treatment of cellulitis and in case of kidney stones.

Did you know:

- The cherry peduncles are used in the cosmetic industry for treating irritated or chapped skin.
- Cherries are also used to produce syrups, beverage and liquors, such as maraschino, the Belgium lambic beer or sour cherry wine, which is a special meditation wine produced in the Marche region by macerating cherries in alcohol then pressing them and mixing the juice obtained with red wine from the Lacrima di Morro d'Alba vine.
